Chronic kidney disease – detection and classification

Whanganui have not localised this pathway

Go to CKD Management

Go to Management of Increased Creatinine

This care map was published by Whanganui District. A printed version of this document is not controlled so may not be up-to-date with the latest clinical information.
Provenance Certificate - Chronic Kidney Disease (CKD)

Overview
This document describes the provenance of Whanganui Regions Chronic Kidney Disease Pathways. This localised pathways were last updated in September 2015.

The purpose of implementing the CCP Programme in our District is to:
- Enhance accuracy of referrals
- Use best practice guidelines
- Have all information found in one place
- Enhance partnerships and collaboration across services
- Improve patient outcomes through seamless care across primary and secondary care

To cite this pathway, use the following format:

Editorial methodology
This care map has been based on a Map of Medicine Care Map developed according to the Map of Medicine editorial methodology. The content of the Map of Medicine care map is based on high quality guidelines and practice-based knowledge provided by contributors with front-line clinical experience (see contributors section of this document). This localised version of the evidence-based, practice informed care map has been peer-reviewed by the WDHB and WRHN Collaborative Clinical Directors and Leaders Forum and with stakeholder groups.

The Pathways align with the MoH Managing Chronic Kidney Disease in Primary Care National Consensus Statement 2015 and BPAC - the detection and management of patients with chronic kidney disease in primary care.

Consumer engagement
Development of the Whanganui Collaborative Clinical Pathways focuses on person-centred care and an experience based co-design approach where consumers are invited to consult with the Health Promoter / Community Developer (who sits on each pathway working group). Consumers are asked prior if possible, or if not at the very start of the pathway process to share their experiences to assist in designing services that work for them and their families, critiquing and feeding back on suitable consumer information and resources which can then be incorporated into the pathways. Feedback obtained ensures we address consumer challenges and needs within the pathway and provide suitable services, information and resources for consumers. Additional information on patient centred care is provided by following this link and experience based co-design of health care services at http://www.kingsfund.org.uk/projects/ebcd.
